

Non-Conformance Report

Student name: Durgahed Bibi Sharfaa

Student id: 20802150

The problem: I kept getting errors while using the matplotlib.pyplot and seaborn library and using the functions, 'subplots()' and 'lineplot()'.

Severity and impact: My line graphs would not display which could have prevented me from visualizing my work and analyzing the messages per day, week and month.

How it occurred: I did not know the right way to code it. I kept getting syntax errors mostly.

How to prevent it from happening again: By making research and practicing to code more and display more graphs.

Plan or time estimate to fix: Seek help from my friends and lecturer to find my mistakes and fix them. It took me 2 hours to finally resolve the problem as my friend helped me find the mistake.
